

AI Prototype Challenge

Forward-deployed AI consultants solve real business problems with AI—fast. You're embedded with clients, turning ambiguous challenges into working solutions that ship.

A prospective client has approached your firm with a business challenge. Your job is to:

- Build a working prototype that demonstrates a viable AI solution
- Prepare a single slide that pitches your solution to client stakeholders
- Demo and defend your approach in a live interview

We're evaluating solution design, technical execution, communication, and how you work under constraints. Time is tight by design, and tradeoffs are expected—be efficient, be pragmatic, and get creative. We'd rather see clever problem-solving than pixel-perfect polish.

Scenarios

Choose one scenario that best showcases your strengths:

- **Manufacturing:** A plant operator wants floor supervisors to get answers from the right documentation. The system should intelligently route questions to the appropriate source (safety procedures, maintenance manuals, or quality control standards) and provide accurate answers.
- **Finance:** A wealth management firm wants a solution that helps advisors quickly get up to speed on a stock—fetching current quote data and summarizing key information from recent SEC filings.
- **Healthcare:** A health system strategy team wants a tool that generates a structured briefing for a given medical condition, covering the current standard of care, emerging treatments in development, and key companies/institutions involved.
- **Open Choice:** Design an AI solution that addresses a challenge in healthcare, finance, or manufacturing. You define the problem, the user, and the solution.

Environment & Data

You have flexibility in how you build your solution. Choose the approach that best demonstrates your capabilities.

Examples of approaches:

- **No-Code / Low-Code:** n8n
- **AI-Native Tools:** Custom GPTs, Gemini, Claude Projects, NotebookLM, Perplexity
- **Code + Frameworks:** VS Code, Python, LangChain, FastAPI, Streamlit
- **Hybrid:** Any combination of the above

For AI-native tools (Custom GPTs, Gemini, Claude Projects, NotebookLM, Perplexity, etc.), you're welcome to use free tiers or your own accounts—we won't provide platform access for these. Data is not provided—you are responsible for sourcing or creating your own.

AI Prototype Challenge

Deliverables

1. Working Prototype (120 minutes recommended)
 - Must be demonstrable via live demo
 - Does not need to be production-ready
 - Interface approach is up to you—chat, form, report, API, or something else
 - Focus on core functionality over polish
2. One Slide (10 minutes recommended)
 - Single slide to support your pitch
 - Treat the interview panel as client stakeholders
 - Structure and content are yours to decide
3. Live Interview (20 minutes)
 - Present your slide and demonstrate your prototype
 - We'll ask questions as client stakeholders evaluating your solution
